Expand café to downtown business district

Unreviewed

Open a second café location in the downtown business district this fall.

Context: Our single shop is at capacity on weekday mornings; a downtown storefront just opened up with three months of free rent; the owner wants to grow before a competitor takes the spot.

Recorded Jul 1, 2026

Assumptions

4 total

A1 Critical · Unreviewed — Edit

Downtown foot traffic will support sales close to what our current location does.

▲ **Warning signal:** Weekday foot-traffic counts, or early sales at the new site, coming in well below the current shop

A2 Critical · Unreviewed — Edit

The business has adequate staffing, supply chain capacity, and operational systems to manage two locations simultaneously without degrading service quality.

▲ **Warning signal:** Customer complaints about wait times or order errors increase at the original location; staff turnover accelerates; supplier delivery delays or stockouts occur; order-to-service time exceeds historical averages at either location.

A3 Supporting · Unreviewed — Edit

The new location will not pull a large share of sales away from our existing shop.

▲ **Warning signal:** Existing-store sales dropping once the downtown location opens.

A4 Supporting · Unreviewed — Edit

The build-out will be finished before the three months of free rent run out.

▲ **Warning signal:** The contractor timeline slipping past the free-rent window.

Add evidence

Market update · Jun 15, 2026 — Delete

A pedestrian-count study of the downtown block shows about 40 percent more weekday foot traffic than the street our current café is on.

Status update · Jun 18, 2026 — Delete

Our last two barista job postings each took about six weeks to fill, and one of those new hires left within a month

Customer feedback · Jun 21, 2026 — Delete

A quick survey of our regulars found that roughly a third of them work downtown and say they would visit the new location instead of the current one

Status update · Jun 24, 2026 — Delete

The contractor confirmed the build-out is on track to finish about two weeks before the free-rent period ends.

Replace the team chat platform this quarter

Migrate the entire team from the current chat application to a new, lower-cost platform before the current contract renews this quarter.

Unreviewed

Context: Our current chat tool keeps going down and the new one is cheaper, and leadership wants the switch done before the current contract renews.

Recorded Jun 20, 2026

Assumptions are what this decision depends on; **evidence** is what you've learned since. Log at least one piece of evidence, then review the decision to weigh each assumption against it. Keep adding evidence over time and review again whenever something changes.

Assumptions

5 total

A1 Critical · Unreviewed Edit

The new chat platform will have reliability that meets or exceeds the team's current needs

▲ **Warning signal:** Platform experiences outages, message delivery failures, or sustained uptime below 99% during first month of production use

A2 Critical · Unreviewed Edit

All important data and conversation history can be successfully migrated from the current tool without loss

▲ **Warning signal:** Post-migration audit reveals missing conversation threads, corrupted message content, attachment failures, or metadata loss; users report inability to locate previously accessible conversations

A3 Supporting · Unreviewed Edit

The team can adopt and productively use the new platform within this quarter

▲ **Warning signal:** After 4+ weeks on new platform, team members revert to old platform for critical communications, error rates increase, communication latency rises, or user satisfaction surveys show sustained dissatisfaction

A4 Critical · Unreviewed Edit

The new platform integrates adequately with other critical tools the team currently depends on

▲ **Warning signal:** Integrations with critical tools (project management, CRM, ticketing, monitoring) fail to sync data reliably; manual workarounds become necessary; integration latency or data loss between systems is observed

A5 Critical · Unreviewed Edit

The contract renewal timeline provides sufficient runway to complete migration and stabilization

▲ **Warning signal:** Migration milestones slip; planned stabilization period compresses before renewal deadline; escalations occur citing time pressure; team discusses rollback contingencies within 4 weeks of renewal

Add evidence

Status update · Jun 16, 2026 Delete

> A pilot with the marketing team saw about 90 percent of them using the new app every day within two weeks.

Support ticket · Jun 19, 2026 Delete

> IT found the new app does not yet connect to our ticketing system, so linking a chat to a ticket has to be done by hand.

Meeting notes · Jun 22, 2026 Delete

> Finance pointed out that above 200 users the new app jumps to a higher price tier, which would wipe out the savings.

Status update · Jun 25, 2026 Delete

> The rollout plan is on track to finish about a month before the current contract renews.

Move order fulfillment to an outside warehouse

Unreviewed

Move e-commerce fulfillment from our in-house warehouse to a third-party logistics provider (3PL) by Q2.

Context: Order volume up 60 percent year over year; warehouse lease renewal due in 8 months; 3PL quotes suggest 18 percent cost savings at current volume.

Recorded Jun 10, 2026

Assumptions are what this decision depends on; **evidence** is what you've learned since. Log at least one piece of evidence, then review the decision to weigh each assumption against it. Keep adding evidence over time and review again whenever something changes.

Assumptions

4 total

A1 Critical · Unreviewed — Edit

The 3PL can match our in-house shipping speed and accuracy closely enough that customers don't notice.

▲ **Warning signal:** Pilot same-day-ship rate or mispick rate diverging from in-house baselines; shipping complaints rising.

A2 Critical · Unreviewed — Edit

The quoted 18 percent cost savings will hold at our actual volumes and SKU count.

▲ **Warning signal:** Pricing-tier triggers in the contract, such as SKU count or volume thresholds, coming into play.

A3 Supporting · Unreviewed — Edit

The 3PL will remain stable and able to onboard us fully before our warehouse lease decision.

▲ **Warning signal:** Ownership changes, onboarding freezes, or client-reported service disruptions at the 3PL.

A4 Supporting · Unreviewed — Edit

Our product data feed is clean enough to drive a third party's pick-and-pack operation.

▲ **Warning signal:** Fulfillment errors traced to catalog or data-feed issues rather than 3PL execution.

Add evidence

Status update · Jun 18, 2026 — Delete

> 3PL pilot, week 3: 94 percent of orders shipped same-day vs our 97 percent in-house. Two mispicks on bundled SKUs, both traced to our product data feed.

Customer feedback · Jun 22, 2026 — Delete

> Post-purchase survey trend: 'fast shipping' mentions in 5-star reviews dropped from 31 percent to 24 percent during the pilot region rollout.

Market update · Jun 25, 2026 — Delete

> The 3PL announced acquisition by a larger logistics group; two of their mid-size clients publicly flagged onboarding freezes during the transition.

Meeting notes · Jun 27, 2026 — Delete

> Ops review: 3PL pricing assumes our current SKU count. Planned Q3 product line expansion adds 40 SKUs, which triggers their next pricing tier.
